Chapter 1: Overview

Description of Release

This continuous delivery release (CDR) contains fixes and enhancements added to the POINT IN application. This CDR is identified as the “EZDataCapture CDR” but contains several other enhancements. See [Resolved Issues for C.0.33.0](#) on page 27 for details.

Dependencies

Continuous delivery releases are intended to be applied to the CDR release immediately preceding this one – not to any other. You must install all previously released CDRs for the applications licensed by your company before installing this release.

Documentation Changes

Issues included in this release affected the following publications:

- Tools Options Guide

The PDF version of this manual is included on the Installation CD.

Alert

None at this time.

Recommended Hardware/DASD/System Software Changes

None at this time.

Other Changes

None at this time.

Chapter 2: POINT IN (C.0.33.0) Installation Instructions

.....

This includes:

- [Host Installation](#)
- [Application Server Installation](#)
- [Online Documentation Installation](#)

Host Installation

.....

If you are on POINT IN Release C.0.28.0, then follow the instructions below for installing POINT IN C.0.33.0.

Complete the following steps to install this POINT IN CDR on the host (iSeries). All the commands must be entered from an iSeries command line.

You must have the previous CDR installed before beginning these install instructions.

.....
Note: Due to documentation formatting, many of the commands wrap to one or more lines. When you are typing the commands, enter them as one continuous line of instructions.
.....

Log on to the iSeries

- 1 Log on to the iSeries as QSECOFR.

Restore and Secure Object Library

- 2 This step restores and secures the PNTC00033O object library.

- a To determine if the library PNTC00033O already exists, enter the following command.

```
WRKOBJ (PNTC00033O)
```

If the message "Cannot find object to match specified name" appears, proceed to step b otherwise proceed to step c.

- b To restore the PNTC00033O library, enter one of the following commands.

Use this command (this is one long command, not two) when restoring from a save file:

```
RSTLIB SAVLIB(PNTPC0033O) DEV(*SAVF) SAVF(location of  
save file/PNTPC0033O) MBROPT(*ALL)  
RSTLIB(PNTC00033O) OUTPUT(*PRINT)
```

Use this command when restoring from tape:

```
RSTLIB SAVLIB(PNTPC0033O) DEV(device name)  
MBROPT(*ALL) ENDOPT(*LEAVE) RSTLIB(PNTC00033O)  
OUTPUT(*PRINT)
```

The message "84" objects restored from PNTPC0033O to PNTC00033O" appears.

- c To secure the object library PNTC00033O, enter the following command.

```
GRTOBJAUT OBJ(PNTC00033O) OBJTYPE(*LIB)  
USER(*PUBLIC) AUT(*USE)
```

The message "Object authority granted" appears.

CDR Development Library

- 3 If you correctly installed the previous CDRs, you should have a CDR Development library. Determine if the Development CDR library exists.

.....
Note: xxxzCDOBJ is the standard naming convention for the CDR library that should be contained in the customer library list (where xxx is your customer acronym and z is

the (D)evelopment, (Q)A, or (R)elease.). This library will contain all of your CDR objects for all installed CDRs. The objects within this library should only contain code that was sent as part of a CDR and should never contain any modifications.

.....

- a To determine if the library xxxzCDOBJ already exists, enter the following command.

```
WRKOBJ (xxxzCDOBJ)
```

If the message "Cannot find object to match specified name" appears, then the prior CDR was not installed and you should not proceed with this installation.

- b If the library does exist, then copy each object/source from PNTC00033O to xxxzCDOBJ.
- c Execute the following command to list all of the objects in the library.

```
WRKOBJPDM PNTC00033O
```

- d Enter a 3 in the **Opt** column for each object listed except objects with an Attribute value of PF-SRC, and press Enter to copy the required objects. When prompted, enter the name of your CDR library (xxxzCDOBJ) in the **To Library** field and press Enter. If prompted that the object being copied already exists in the CDR library, enter the letter Y to delete the existing object, and press Enter.
- e Enter the command below once for each of the following source file types: CBL, CBLLE, CL, CLLE, CMD, LBL, RPG, DDS, EZT (replace the xxx in the command with the source file type). Enter a 3 in the **Opt** column for each object listed and press Enter. When prompted, enter the name of your CDR library (xxxzCDOBJ) in the **To Library** field and press Enter. If prompted that the object being copied already exists in the CDR library, enter the letter Y to delete the existing object, and press Enter.

```
WRKMBRPDM PNTC00033O/QxxxSRC
```

Customer Modified Libraries

- 4 Determine if you have modified any of the programs for this CDR:

- a Check Customer Modified Libraries to determine if any of the objects contained in the PNTC00033O library are also in the Customer Modified Libraries.
- b If modifications are found, the changes made in the PNTC00033O programs will need to be retrofitted into the Customer Modified Library.

.....
Note: If there are multiple Customer Modified Libraries, all of them should be checked for collisions with code contained in the PNTC00033O library.

Create Temporary Library

- 5 Create Temporary library (PNTTEMPDAT).

```
CRTL LIB (PNTTEMPDAT) TYPE (*TEST)
```

Log Off

- 6 Log off as QSECOFR.

Log On

- 7 Log on now as APSOWNER.

Set up Library List

- 8 Set up the Library List so that the Data library is included.

- a Enter the following command (where xxx is your customer acronym and z is for (D)evelopment, (Q)A, or (R)elease):

```
ADDLIBLE xxxzC0DAT
```

The message "Library xxxzC0DAT added to library list" appears.

- b Enter the following command.

```
CHGCURLIB xxxzC0DAT
```

The message "Current library changed to xxxzC0DAT" appears.

Create Physical Files

- 9 This step creates the physical files. For each Physical File in the [Physical Files](#) list, enter the following command.

```
CRTPF FILE (xxxxC0DAT/physical file name)  
SRCFILE (xxxxCDOBJ/QDDSSRC) SRCMBR (*FILE)
```

The message "File physical file name created in library xxxxC0DAT" appears.

Create Logical Files

- 10 This step creates the logical files. For each logical file in the [Logical Files](#) list, files enter the following command.

```
CRTL F FILE (xxxxC0DAT/logical file name)  
SRCFILE (xxxxCDOBJ/QDDSSRC) WAITRCD (30)
```

The message "File logical file name created in library xxxxC0DAT" appears.

Update Table Entries

- 11 Updates to the tables will be done using the RUNSQLSTM command.

ASAKREP, ASAMREP, ASANREP, BASPEZCTRL, BASSYSLVL, BASSYS0600, BASSYS0701, BASSYS0702, BASSYS0800, RCI7REP, RCI8REP, TBBC01, TBMS01, TBMS09, TBNR01, TBPP010, TBPULFAST, TBTL17, TBTL20, TBWC04, TBWC07, TBWC10, TBWC13, TBWC13A, TBWC14, TBWC15, TBWC20, TBWC27, TBWC52, TBWC68 and TBWCAT

- a Change the current library to the temporary library using the following command.

```
CHGCURLIB PNTTEMPDAT
```

The message "Current library changed to PNTTEMPDAT" appears.

- b Copy the files that will be updated using the following command.

```
CPYF FROMFILE (xxxxC0DAT/<filename>)  
TOFILE (PNTTEMPDAT/<filename>) MBROPT (*REPLACE)  
CRTFILE (*YES)
```

- c Enter the following command.

```
CHGCURLIB xxxzC0DAT
```

- d Now that the files have been backed up, we will run the SQL Scripts that will update the tables. Enter the following command to run the SQL scripts:

```
RUNSQLSTM SRCFILE (xxxzCDOBJ/QEZTSRC)
SRCMBR (SCRIPTC033) COMMIT (*NONE) OUTPUT (*PRINT)
```

If errors are found, this means that the data in the file is different than the expected data. This is not a serious problem, it just means that you have customized some of the table entries that we are trying to update. The print file will need to be reviewed to determine where the problem was and the SQL Scripts or file will have to be adjusted to correct this error.

Log Off

- 12 Log off as APSOWNER.

Log On

- 13 Log on now as QSECOFR.

Clean Up

.....
IMPORTANT: Do not do the next step until all steps defined above have been completed.

- 14 Remove the PNTC00033O library by using the following command.

```
DLTLIB LIB (PNTC00033O)
```

- 15 Remove the temporary PNTTEMPDAT library by using the following command.

```
DLTLIB LIB (PNTTEMPDAT)
```

.....
Note: Delete the above library only when you've copied/retrofit all the data back to XXXZC0DAT Library. Make sure that your application is also working before deleting this library.

Physical Files

The list of physical files to be generated:

BASPEZCTRL	PF	New	Control Date File for EZCAP system
------------	----	-----	------------------------------------

Logical Files

BASLEZCAP2	LF	New	LF over PF file - BASPEZCAP by FORMLN, SEQNO
------------	----	-----	--

Application Server Installation

WebSphere Application Server Version 6.1.0.x (Express, Base, Network Deployment) for Microsoft Windows Server 2003 Installation

This section contains the information needed to install the application server for POINT IN. There are three sections to this installation:

- [Section I. Server Side Installation](#)
- [Section II. Server Side WebSphere Configuration](#)
- [Section III. Additional Configuration – Properties Files](#)

IMPORTANT: It is strongly recommended that the following backups be completed before proceeding with the installation of this POINT IN CDR.

- a WebSphere Application Server administration configuration
- b POINT IN application directory (.ear folder)

Section I. Server Side Installation

Note: The installation CD is designed to work with WebSphere installed on machines running Windows. If WebSphere is installed on an iSeries machine, it will be necessary to manually copy the new folders/files to the application directories of the iSeries Internal File System

(IFS) after extracting them from the CD on a Windows-based platform.

.....

- **Main Menu Information**

Once you have inserted the POINT IN CD-ROM into the CD-ROM drive, the Welcome page displays the main menu with the following buttons: Main Menu, Documentation, Install, Browse Media, CSC Web Site, Contact, and Exit.

- **Documentation**

To access the documentation, click the Documentation button on the Main Menu. The Documentation page opens so you can view documentation and/or Install Adobe Acrobat Reader prior to installing the product.

- **Install**

Clicking the Install button opens the Install Product page.

- **Browse Media**

Clicking the Browse Media button from the Main Menu displays the folders and files on the CD-ROM.

- **Contact**

The Contact page displays the CSC customer assistance address, telephone number, fax number, email address, and Web site information.

POINT IN Installation

- 1 From the Install Product menu, click the Browse POINT IN Installation Folder on CD button. The installation folder (AppServer) displays.
- 2 Open the AppServer folder and copy its contents to the pointC0.war directory located in the application EAR folder in the WebSphere Application Server profile directory where the previous CDR was deployed.

Example:

D:\WAS61\AppServer\profiles\yourprofile-name\InstalledApps\yournode&cell\pointC0.ear\pointC0.war\

.....
Note: While copying the contents of the POINT IN installation directory, a dialog box confirming any files to be overwritten may be displayed. If prompted, select the Yes to all option to continue the installation.
.....

- 3 To apply any environment specific changes overwritten during the installation, simply compare the pointC0.ear folder backup taken prior to installation, to the pointC0.ear folder as it exists on the application server post-install then retrofit the changes.
- 4 The POINT IN product installation is now complete. Close the window displaying the AppServer folder and return to the Install page on the installation disc.

Section II. Server Side WebSphere Configuration

There are no Server Side WebSphere Configuration changes for this release.

Section III. Additional Configuration – Properties Files

There are no Properties files configuration changes for this release.

Online Documentation Installation

.....

- 1 From the Documentation panel on the installation CD, select the Install POINT IN C.0.33.0 On-Line Help button.
- 2 Click Next to continue the installation.
- 3 For Online Help to function correctly, the POINT IN application must be installed. Click Yes to continue.
- 4 Read the text of the License Agreement and click Yes to accept it.
- 5 Click the Browse button to set the correct full path for the \Documentation folder location. For example:

 ...\pointc0ear\pointc0.war
- 6 Click Next to continue.

- 7 Review the settings before clicking the Next button. At this time, all the objects for online help will be copied to the destination.
- 8 Click Finish.

Chapter 3: Impact of Changes

This chapter lists the impacted host and server components with their associated FSIT numbers for this POINT IN CDR.

- [Server Side](#)
- [Host Side](#)

Server Side

The server side objects are provided below.

Location	Object Name	Action	FSIT	Type	Additional Information
AppServer\jsp	CPPFormsList.jsp	Modified 114434	Enhancement	expand TBEZCAP to include Workers Comp Line of Business	
AppServer\jsp	CPPFormsList.jsp	Modified 116705	Defect		use the location, bldg, and unit from the row selected in the grid
AppServer\jsp	EmailPopup.jsp	Modified 126898	Defect		correct the alert message
AppServer\jsp	EzcCopyForm.jsp	Modified 114434	Enhancement	expand TBEZCAP to include Workers Comp Line of Business	
AppServer\jsp	EzcCopyForm.jsp	Modified 120150	Enhancement	support the Data only screen development	
AppServer\jsp	EzcDataOnlyAjax.jsp	New	120150	Enhancement	
AppServer\jsp	EzcDetailElement.jsp	Modified 114434	Enhancement	expand TBEZCAP to include Workers Comp Line of Business	
AppServer\jsp	EzcDetailElement.jsp	Modified 118796	Defect		filter policy interest types
AppServer\jsp	EzcDetailElement.jsp	Modified 120150	Enhancement	support the Data only screen development	

Location	Object Name	Action	FSIT	Type	Additional Information
AppServer\jsp	EzcDetailElement.jsp	Modified 134702	Defect		send an alert and enable the field WS_EZT_EL_NAME
AppServer\jsp	EzcDetailElement.jsp	Modified 134949	Defect		modified the code to make sure fields are read-only in the inquire mode
AppServer\jsp	EzcDetailGrid.jsp	Modified 114434	Enhancement	expand TBEZCAP	to include Workers Comp Line of Business
AppServer\jsp	EzcGenerateForms.jsp	Modified 114434	Enhancement	expand TBEZCAP	to include Workers Comp Line of Business
AppServer\jsp	EzcGenerateForms.jsp	Modified 116341	Defect		fixed the display of the * for required fields
AppServer\jsp	EzcGenerateForms.jsp	Modified 118796	Defect		add logic to select associated policy interests
AppServer\jsp	EzcGenerateForms.jsp	Modified 120150	Enhancement	support the Data only screen	development
AppServer\jsp	EzcGenerateForms.jsp	Modified 134949	Defect		modified code to correct the data display
AppServer\jsp	EzcGenerateForms-Grid.jsp	Modified 114434	Enhancement	expand TBEZCAP	to include Workers Comp Line of Business
AppServer\jsp	EzcGenerateForm-sPaint.jsp	Modified 114434	Enhancement	expand TBEZCAP	to include Workers Comp Line of Business
AppServer\jsp	EzcGenerateForm-sPaint.jsp	Modified 116337	Defect		correct double quotes to display properly
AppServer\jsp	EzcGenerateForm-sPaint.jsp	Modified 118796	Defect		add logic to select associated policy interests
AppServer\jsp	EzcGenerateForm-sPaint.jsp	Modified 120150	Enhancement	support the Data only screen	development
AppServer\jsp	EzcGenerateForm-sPaint.jsp	Modified 134702	Defect		modified to support the Data only screen to hide the dynamic fields 'ID_M'
AppServer\jsp	EzcGenerateForm-sPaint.jsp	Modified 134945	Defect		modified the Label positioning for correct display
AppServer\jsp	EzcGenerateForm-sPaint.jsp	Modified 134949	Defect		modified the check box positioning for correct display
AppServer\jsp	EzcGenerateFormsT-EST.jsp	Modified 114434	Enhancement	expand TBEZCAP	to include Workers Comp Line of Business

IMPACT OF CHANGES

Chapter 4: Resolved Issues for C.0.33.0

Note: Code is marked in the programs with the Financial Services Issue Tracking (FSIT) number.

This is the description of all issues included in this CDR. The issues are provided in numerical order under two headings, Enhancements and Non-Conformities.

Enhancements

114434	EZD WC - Expand EZDataCapture to include WC line of business
BUSINESS ADVANTAGE	The goal of this project is to design and implement a process that provides for the collection of form data during policy issuance and stores that data for use during subsequent transaction processing for workers compensation.
DESCRIPTION	The EZDataCapture process was developed for all Lines of Business except Workers Compensation. This will add that functionality.
RESOLUTION	Modifications have been made to the existing EzDataCapture functionality for ALR lines to now include Workers Compensation.
DOCUMENTATION	- Tools Options Guide - New Business Policy Processing Guide

120150

EZD - Add EZDataCapture “Data-Only” functionality

BUSINESS ADVANTAGE

Users will be able to customize the screens to capture additional information relates to the existing POINT IN screens.

DESCRIPTION

Currently EZDataCapture only supports screens that are associated with and initiated from Forms attachment. Enhance this product to allow screens to be painted to collect missing policy data that is not required for or associated with Forms. This “Data-Only” screen will have the ability to be launched from any screen that has a Submit button.

RESOLUTION

Define a Data-only screen using the EZDataCapture utility. This screen is linked to an existing screen by the JSP name. When the existing screen is selected a new button (EzData) will appear on the screen allowing for entry of data on the EZDataCapture Data-Only screen.

DOCUMENTATION

128158

WCP - Implement state of West Virginia as an NCCI state

BUSINESS ADVANTAGE

Surcharges will be implemented for state of West Virginia which is no longer a monopolistic state.

DESCRIPTION

For all new business, renewals, rewrites, endorsements with a policy inception date on or after 07/01/2008 West Virginia will be a Workers' Compensation state and should be reported to NCCI.

The enhancement is expected to achieve the following:

1. State of West Virginia should be implemented as a Worker's Compensation state.
2. All three necessary surcharges need to be implemented for West Virginia. These surcharges are:
 - Regulatory Surcharge
 - Deficit Reduction Surcharge
 - WV Fire and Casualty Surcharge

RESOLUTION Implemented state of West Virginia as Worker's Compensation State in POINT IN system.

Non-Conformities

.....

116337 **EZD - Double Quotes are not handled properly on the return from the host**

BUSINESS IMPACT Missing information.

DESCRIPTION When double quotes are entered as part of a text field they are stored properly on the AS/400, however, when returned for display on the client they are not displayed and the text following the double quotes is truncated.

RESOLUTION Modified the jsp to place an escape character in front of double quotes when they are encountered in the contents of a text field.

116338 **EZD - Remove hard coded template from ezCapDetailShowMap.xsl and ezCapShow.xsl replace with include**

BUSINESS IMPACT This will make the future modifications simpler for the date handling code.

DESCRIPTION This issue will correct a comment received during code review for the original project to add EZDataCapture for CPP. The EzCapDetailShowMap.xsl and ezCapShow.xsl files both contained code to handle date formatting. This code is available as an "include" so this FSIT addresses removing the code from the stylesheets and replacing it with the include. This way the date handling code will be in one place which will make future modifications simpler.

RESOLUTION Modified the stylesheets to include the date template.

116341 **EZD WC - The asterisk indicating a required entry field is not printed**

- BUSINESS IMPACT** User will not be able to identify the mandatory field since the asterisk is not printing along with it.
- DESCRIPTION** The asterisk indicating a required field is not printing when all of the fields within a subtitle group do not have a label. The label is being calculated to a zero length leaving no space for the asterisk.
- RESOLUTION** Modified the label calculation to default to 20 to leave room for the asterisk to display.

116705 **EZD - Problem with the Forms List Grid and EZDataCapture Forms**

- BUSINESS IMPACT** User will not be able to see forms attached to a particular unit correctly.
- DESCRIPTION** When the forms list grid is selected from the navigation panel and then a specific form is selected for view from the grid the key used to retrieve the data from the database is generated from the navigation panel instead of the key from within the grid.
- Example: Policy contains CA insurance line with 25 units. A form is added to unit number 20. If the forms list is selected from the navigation panel under unit number 10 the list of forms displayed contains the form that was entered for unit number 20, however, if you select that form from the grid no data is displayed because the unit number used to retrieve the data from the database is 10.
- RESOLUTION** Modifications were made to use the key values from the grid display instead of the navigation pane.

116874 **EZD - Utility Version action copies past the key**

- BUSINESS IMPACT** User will be confused with the record being copied for the version of the form.
- DESCRIPTION** Using the EZDataCapture utility when a form is versioned the first record on the next form is also copied.
- RESOLUTION** Modifications were made to prevent reading past the key.

118796 **EZD - Filter the policy interest drop-down to contain only those that apply to the form**

- BUSINESS\$IMPACT** User will not be able identify the interest type to which a form is associated since all the interest types will appear in the drop-down.
- DESCRIPTION** EZDataCapture forms that are associated with a policy interest need the ability to specify which interest types to be associated with so that the drop-down presented on the screen can be filtered.
- RESOLUTION** Modifications were made to allow the entry of policy interest types when a screen is being defined. These values are then used when painting the screen to filter which policy interests are displayed in the drop-down.

119237 **EZD - EzData Forms modified on endorsement are not printing**

- BUSINESS\$IMPACT** The form modified during endorsement will not print with the changes.
- DESCRIPTION** When a policy is endorsed and the EzData is modified for a form, the form is not printing. Update the WC FormAdded indicator to a 'Y' when an EzDataCapture form is modified on endorsement.
- RESOLUTION** Modifications were made to the extract process to check the update date on the EzData forms and if it falls within the cycle dates the record place on the extract indicates that the form is new so it will be printed by Document Production.

127841 **EZD - Unable to add more data on policy form created through EZ Data capture with default logic**

- BUSINESS\$IMPACT** User is unable to enter the data into the EZDataCapture form.
- DESCRIPTION** There is a problem with the default logic in the program because of which the document doesn't have a Y under the EZ Screen field.
- STEPS TO RECREATE**
1. Create a form CG2412 – entries from TBEZCAP with default PCO and State.
 2. Create a policy and try access the Form List Screen.

3. The form should have a Y in EZ Scrn field and have a drop-down that would allow to enter the data in the form.

RESOLUTION Modified the 99 default logic for the LOC, MCO & PCO combination.

128698

EZD - Processing messages are not shown when submitting changes and form titles are not displayed in EZDataCapture

BUSINESS IMPACT Confirmation is not given to a user when a change has been done to a screen in EZDataCapture.

DESCRIPTION The processing messages are no longer shown when different transactions are done within EZDataCapture. When a screen is expired, copied, or deleted, the user doesn't receive a message that confirms that this function was done correctly.

STEPS TO RECREATE **Test 1: Name of screen should display**
1. Go to Main Menu > Tool Maintenance > EZDataCapture.
2. Click Display button.
3. Select Text next to any form from the drop-down.
4. Form name should be displayed not Supplemental Form Data.

Test 2: Map a form
1. Go to Main Menu > Tool Maintenance > EZDataCapture.
2. Click Display button.
3. Find a verified form and select Map from the drop-down.
4. Once the screen comes up, click Generate Excel button.
5. Type in an email address and click Send Email.

RESOLUTION Changed the Definition of TITLE1 for correct and complete display of the Title.

134702

EZD - The Name field does not become active after reset when Title is entered in it once

BUSINESS IMPACT User will not be able to enter any data in the name field if once Title has been entered in that field and it has been reset.

DESCRIPTION Issue#1

When a user enters Title in the name field by mistake and then reset the data, the name field remains disabled and the user cannot enter any data on that screen in the name field. The only option available for the user is to click on the 'Cancel' button and go back and then again Add the element. This will happen only in the case of Title name element since the field disables after entering Title and does not activate on resetting the data.

Issue#2

When map option is taken for a form, the screen which gets displayed has some extra text at the right side of the screen which will be confusing for the user.

STEPS TO RECREATE Issue # 1

1. Click on New Element.
2. Enter Title in the name field and tab out.
3. Click on the Reset Button.
4. The name field will not be activated and user will not be able to enter anything in the field.

Issue # 2

1. Select 'Map' option for a form.
2. Verify the screen that gets displayed.

RESOLUTION Changed the code in EzcDetailElement.jsp to make sure the 'Name' field is not disabled after Reset button is clicked.

134945

EZD - The text alignment for the labels with and without asterisk is not correct on the EZData capture screens

BUSINESS IMPACT This does not conform to the POINT IN screen standards.

DESCRIPTION When a screen is designed using EZDataCapture utility having some fields as mandatory and some fields as optional, the text of the labels for these fields is not aligned as per POINT standards which is incorrect.

- STEPS TO RECREATE**
1. Design a screen using EZDataCapture having text as optional field, date as required field and number as required field.
 2. Finalize the screen.

3. Access the screen in the Test mode and verify the alignment of the text.

RESOLUTION Modified the Label positioning for correct display.

134949

EZD - Multiple issues found with EZdata Capture screens

BUSINESS IMPACT Various usability issues for the users using EZDataCapture screens.

DESCRIPTION Issue # 1 - If the data is not entered in the first optional field on the EZData screen but is entered in all other fields. After submitting the screen, the data gets mixed up and all the data gets displayed in the first field which was optional and was left blank.

Issue # 2 - When any element is opened in Display mode, three fields on the screen Data Type, Stored in Field and Stored in Seq are enterable which is incorrect since they are supposed to be read only fields.

Issue # 3 - The text is not properly aligned with the check box on the EZData screen when the Data type is check box.

STEPS TO RECREATE **Issue#1**

1. Design a screen having first field as optional and other fields as required.
2. Enter data in all fields except for the first optional fields.
3. Submit the screen and verify the data entered in all the fields.

Issue#2

1. Select Display option for any EZDataCapture element.
2. Verify the Data Type, Stored in Field and Stored in Seq fields for the entry of data.

Issue#3

1. Create an element having check box.
2. Access the screen in the test mode.
3. Verify the alignment of the text with the check box.

RESOLUTION Corrected the screen settings for correct display and also the host modules to make sure the data gets stored correctly.

Appendix A: Screen Names / JSP Names

The following is a list of POINT IN screen names. The first column (SS) contains an abbreviation of the subsystem the screen is part of. The second column (Screen/Panel Title) is the name of a screen as it displays in POINT IN. The third column is the correlating JSP (Java Server Page) file name for that screen. Some screens are formed by joining a header screen and another screen thus you will see more than one file name.

Note: Not every screen is listed.
