

In a browser, go to prdwebtfs01:8080/tfs/AppDev

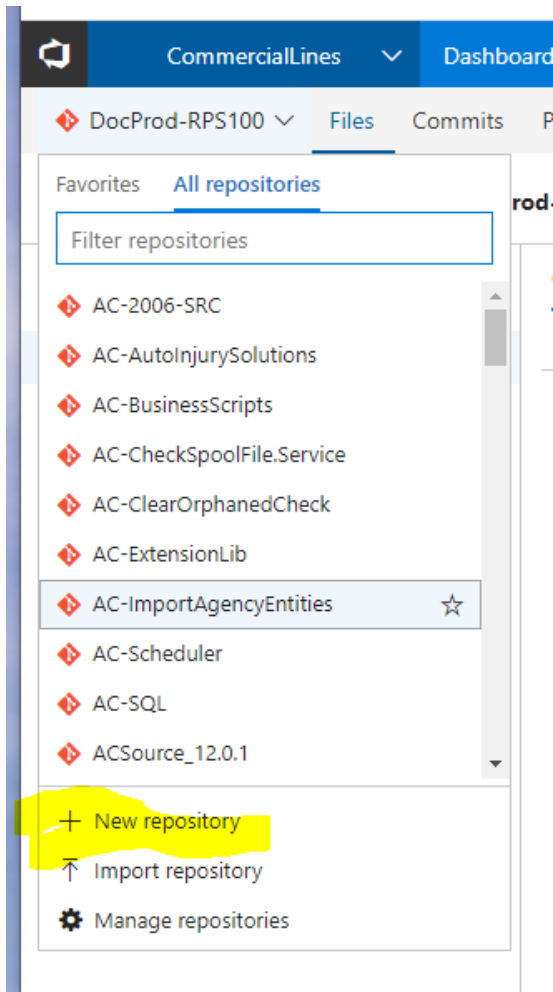

Under Projects, click on CommercialLines

Click on the "Code" tab

Click on the Drop Down list of Repositories

To create a new repository, click "+ New Repository"

Enter the name – This name should match the folder on your local.

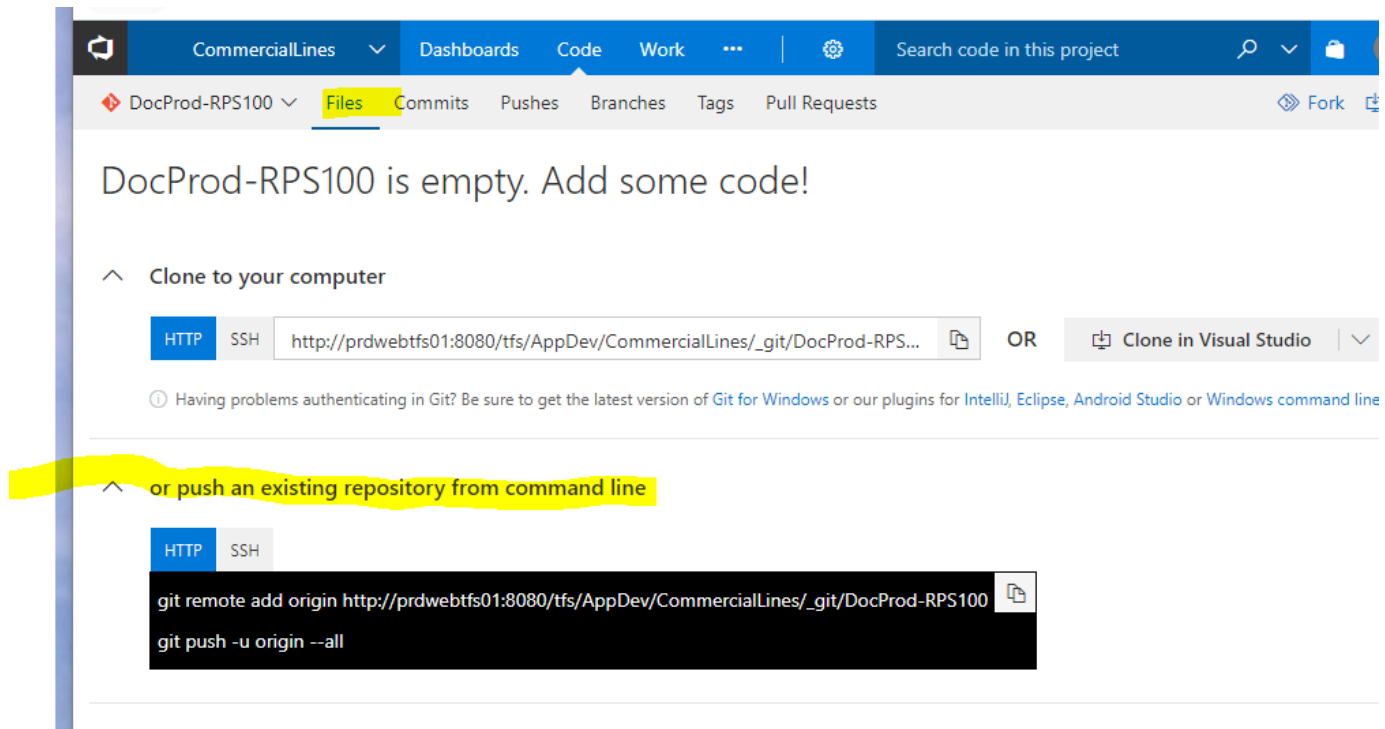

A screenshot of the 'Create a new repository' dialog box in Visual Studio. The dialog has a title bar with a close button (X). Inside, the 'Type' dropdown is set to 'Git'. Below it, the 'Repository name' field is highlighted with a blue border and contains the text 'DocProd-RPS100'. There is an unchecked checkbox for 'Add a README to describe your repository'. Below that, the 'Add a .gitignore:' dropdown is set to 'None'. At the bottom right, there are two buttons: 'Create' (in blue) and 'Cancel' (in grey).

After you click "Create", the following appears.

Click Files tab

Goto "PUSH an existing repository from command line"

Open a command line and navigate to the repository folder on your local
run each command separately

git remote add origin http://prdwebtfs01:8080/tfs/AppDev/CommercialLines/_git/DocProd-RPS100 change to
you folder name

```
C:\SRC\DocProd-RPS100>git remote add origin http://prdwebtfs01:8080/tfs/AppDev/CommercialLines/_git/DocProd-RPS100
```

git push -u origin --all (This screen print also shows the processing statements)

```

C:\SRC\DocProd-RPS100>git push -u origin --all
