

DocProd Checklist

For Adding a new form to DocProd

Create the FORM file

Task	Description	Status	Date
Review Requirements	Bus Req Overview		
Obtain WORD version	Get from project folder on SharePoint		
Obtain PDF version	Get from project folder on SharePoint		
Update Local XLS	Enter into Master Form XLS		
Determine FAP file name			
Create RTF version of the form	Open in WORD, SaveAs RTF using the new file name. Copy the RTF file to the FORMS folder in the MRL		
Create the new FAP File	Open the RTF file in the Image Editor, SaveAs FAP file....Save DDT - yes		
Reformat the FAP file to match the PDF	Using defined template Headers, footers, column breaks, line breaks lines and grids		
Add fields, if any	Adhere to current formats. Field lengths		
Field Mapping	Look at previous version of the form Overflow		
Create PDF version from DocProd	Use the utility		
PDF Compare	Compare PDFs from DocProd vs from Products. Resolve differences		
Send PDF Proof Copy to Kraig			
Update Network XLS	Enter into Network Master Form XLS		

Implement the new Form into DocProd

Validate that FAP and DDT files exist in the proper folders	If you created a PDF in the above section, then the objects are in the proper folder.		
Add new form to FORM.DAT	Add the form to all LOBs that apply		
Add new form to SETRCPTB.DAT	Add the form to all LOBs that apply Is the new form state specific with a counting parm for overflow? If so, maybe the all states version of the form needs to exclude the new state? Examine on a case by case basis		
Any Changes to existing form's field mapping?	le. A new state version of a form. Need to split up the data that goes on this form vs the old "all states" version, therefore change the current forms mapping, Examine on a case by case basis.		

Unit Test

Find an EXTRFILE.DAT	Edit a form record (ASBE) to make the new form generate Utility = Extract Viewer		
Run GENTRAN, GENDATA, GENPRINT (PCL and PDF)	Look into output files to validate		
POLFILE.DAT	Open the file and validate that the new form is there A utility is available to make this file more readable		
PCL file	Using Swiftview, open and view the new form		
PDF file	Open the output file and view the new form		
If variable fields on the form, validate the data			
Move to DocProd SandBox for ALR unit test			
Create Inventory List			
TFS
